India Waste Management — Key Insights & Recommendations

Sustainability, Infrastructure & Operational Performance | 2015–2026

Executive Summary

India's waste management system shows a measurable gap between waste generation and processing capacity. Recycling and segregation performance indicate opportunities to strengthen recovery, while landfill dependency remains significant. Operational performance also varies across city categories and regions, highlighting the need for targeted improvement strategies.

⚠️ Processing Gap

223.99K

Waste generation exceeds available processing capacity.

♻️ Avg Recycling Rate

36.68

Scope exists to improve material recovery.

🗑️ Average Segregation Rate

55.87

Better segregation can support downstream treatment and recycling.

🗑️ Landfill Dependency

45.5

Better segregation can support downstream treatment and recycling.

Sustainability Performance by State

🗑️ State Sustainability Insight

Higher sustainability scores are observed in states such as Delhi, Telangana, Jharkhand, Karnataka, Gujarat and Assam. This indicates variation in sustainability performance across states.

Collection Efficiency	Recycling Rate	Waste Type
66.8	24.7	Organic
64.6	27.6	Biomedical
62.9	42.1	Plastic
60.6	70.7	Metal
60.4	56.4	Paper
58.9	57.2	Glass
56.8	27.0	Construction
62.2	36.7	

🗑️ City Category Insight

Collection efficiency varies across city categories, with the dashboard showing 78.4% for Metro, 69.9% for Tier-1, 60.3% for Tier-2 and 51.1% for Tier-3 cities.

🔧 Recommendations

01

Improve Source Segregation

Increase segregation efforts to improve the quality of recyclable and treatable waste streams.

02

Strengthen Recycling Pathways

Focus on waste categories with lower recycling performance and improve collection-to-recycling conversion.

03

Address Processing Capacity Gaps

Prioritize areas where waste generation exceeds available processing capacity.

04

Strengthen Collection Infrastructure

Review collection infrastructure and operational practices across different city categories.

05

Reduce Landfill Dependency

Expand suitable recycling, composting and other treatment pathways to reduce reliance on landfill disposal.
